Financial Accounting Theory According to Deegan At its heart financial accounting theory as explored by Deegan examines the why behind the numbers Its not just about how to record transactions but about the underlying assumptions biases and motivations that shape financial reporting It explores the crucial role of judgment in financial decisionmaking focusing on how the choices made in preparing financial statements impact users like investors creditors and regulators Think of it as the detective work behind the seemingly straightforward balance sheet and income statement

Key Concepts to Grasp Deegans work often highlights these crucial areas

- Conceptual Framework This forms the foundation of financial accounting standards It lays out the objectives of financial reporting the qualitative characteristics of useful information like relevance and reliability and the elements of financial statements assets liabilities equity etc Think of it as the blueprint for building a reliable financial report
- Positive vs Normative Accounting Theory Positive theory attempts to explain what is focusing on how accounting practices are actually used and what motivates those choices Normative theory focuses on what should be proposing ideal accounting standards and practices Deegans work often bridges these two perspectives showing the gap between theory and practice
- Agency Theory This examines the relationship between principals shareholders and agents managers It highlights the potential for conflict of interest as managers might act in their own selfinterest rather than maximizing shareholder value Accounting information plays a crucial role in monitoring and mitigating this conflict For example robust internal controls and transparent reporting mechanisms can help align managements interests with those of shareholders
- Stakeholder Theory This broader perspective acknowledges that companies have responsibilities to a wider range of stakeholders not just shareholders This includes suppliers and the community Deegans work emphasizes the importance of considering the needs and perspectives of all stakeholders in accounting and financial reporting For example environmental social and governance ESG reporting is a direct application of stakeholder theory in practice

Practical Examples Lets illustrate these concepts with a simple example Imagine a company deciding how to account for a new piece of equipment

- Positive Accounting Theory The company might choose the depreciation method that minimizes reported profits in the short term potentially to reduce taxes or avoid attracting unwanted attention from competitors This aligns with the selfinterest motivation highlighted in positive accounting theory
- Normative Accounting Theory The company should choose the depreciation method that most accurately reflects the economic reality of the equipments decline in value regardless of the shortterm impact on reported profits This aligns with the

principle of fair presentation emphasized in normative accounting theory Agency Theory Shareholders might use the reported depreciation expense to assess the efficiency in managing assets If the depreciation is manipulated, it could affect shareholders ability to effectively monitor management
